Dear Pandora HR Team:

I am currently a Masters degree candidate in Computer Science and I'm very interested in your Software Engineer position in Boulder. I believe I can make a great contribution to your company by sharing my skills, experience and tremendous enthusiasm in the field.

For the last year I have been working on a development team primarily using Java to maintain the current and legacy codebase as well as develop new features for Time Warner Cable set top boxes. It's been a privilege to work on a project where my changes will be seen by over 10 million customers. While this is a great feeling, it has also taught me how important it is to produce quality work and ensure my code has been tested extensively. I am hoping to take these skills and philosophies I've learned and apply them at Pandora. I have expertise in a variety of languages and technologies. I've previously mentioned Java but I have also developed tools in Python, and JavaScript as well as mobile apps in Objective-C.

My education, experience and genuine passion for software engineering make me an ideal candidate for this position. I have included my resume and I am eager to speak with you regarding my qualifications for this position. I would also love the chance to present the work I have done. If you have any questions please feel free to contact me at (720) 989-6512 or by email at cheslip@mac.com. Thank you very much for your time and consideration.

Sincerely yours,

Cory Heslip
